Implementation Research to Enhance Equity-Focused HIV Prevention in New York City

U01PS0005239 (Golub, PI)

2021-2026

This cooperative agreement includes a Core Project (stepped-wedge, cluster randomized evaluation of the GOALS Approach to universal HIV prevention screening and education) and a Collaborative Project (mixed method, interrupted time series evaluation of Quality-Based Financing of HIV prevention contracts) to examine the impact of each implementation strategy on health equity and EHE goals in NYC. The project is a collaboration with the NYC Department of Health and Mental Hygiene (NYC DOHMH).

Synthesizing Best Practice to Accelerate Access to Emerging HIV Prevention Modalities

R01MH123262 (Golub/Meyers, MPI)

2020-2025

This project applies an implementation science approach to support the federal Ending the HIV Epidemic “Protect” pillar by developing biobehavioral infrastructure that will support expansion of effective PrEP delivery programs and promote health equity in the dissemination of emerging biomedical HIV prevention strategies.

Yunnan-ADARC HIV Prevention Program: Developing And Testing A Model To Implement And Sustain Prep Delivery In China

R01MH119884 (Meyers)

2019-2024

The Yunnan-ADARC HIV Prevention Program studies the process of integrating PrEP into an existing health system and generate an implementation blueprint that can be used by other health systems planning to introduce PrEP to decrease incidence of HIV in priority populations.

CHALO! Social media/mobile health intervention to accelerate HIV Testing and linkage-to-care

R01MH119001 (Patel)

2019-2024

The goal of this research is to create an innovative and scalable model for engaging men who have sex with men (MSM) in India in HIV testing and linkage-to-care by testing the effectiveness of a social media based behavioral intervention.

Role: Co-Investigator

Following a U.S. National Cohort of Vulnerable Men to Improve HIV Prevention and Care

UG3AI133675 (GroV)

2017-2022

This project uses innovative technology to enroll and follow a large-scale epidemiological cohort of 5,000 high-risk HIV-negative gay, bisexual, and other men who have sex with men (GBM) ages 16 to 49—the population representing the highest percentage of new infections annually—and follow them prospectively for four years.
